

FertilityCare Centers of North Texas present

Creighton Model System and NaProTechnology: An Authentic Approach to Infertility

April 28th, 2012 at 3:00 pm

St. Elizabeth Ann Seton Catholic Church Formation Building Auditorium

Guest Speakers:

Don D. Palencia, D.O. – A Pro-life, pro-family physician. Much of his approach toward health care comes from a reverence of life from conception to natural death. He believes in aspiring for healthier families, not just in terms of physical health, but also healthy relationships within marriage and amidst our families. Most recently he has been an advocate of fertility awareness and natural family planning (NFP). He is trained in NaProTechnology, which is the medical application side of the Creighton Model System of Fertility Care. This is a new and exciting component of his practice which he believes most, if not all, would benefit from learning more about.

Emily Glicksman –Has a B.A. in Politics from The University of Dallas and an M.T.S. in Marriage and Family Studies from the Pontifical John Paul II Institute in Washington, D.C. She has been teaching for over 7 years, in a traditional school setting, through her parish, and currently at the St. Paul Institute Home Schooling Co-op in Irving. She and her husband, Andrew, returned to the DFW area so Andrew could pursue teaching Biblical Studies at UD. They have been Creighton clients for four years, and because of their course of treatment at the Pope Paul VI Institute, were able to conceive their son, Anthony Immanuel, born March 2010.

Client Panel – Several couples who have used Creighton Model System and NaProTechnology to address their infertility issues and ultimately expand their families. Hear their stories of disappointment, challenges and their children.
